

Handoff Documentation

Castillo Planset QC — Complete Package

Document	Index
Audience	All stakeholders
Revision	Rev 1.0 · 2026
Status	Handoff

Documentation Index

This package is the complete engineering handoff for the **Castillo Planset QC** platform — the AI-assisted QA/QC tool for solar PV plansets. It contains eight documents covering the product, its use, its architecture, its operation, and its roadmap.

How to use this package

Read in the order below, or jump to the document that matches your role. Every document shares this cover format, a header/footer, and the Castillo status-color convention (Pass = green, Fail = red, Needs Review = amber, Deferred = purple).

Documents in this set

#	Document	For whom	What it covers
1	Project Overview	All stakeholders	What the tool is, architecture, stack, environments, status
2	User Guide	QC Engineers	Signing in, running an analysis, reading and exporting reports
3	Operations & Deployment Guide	DevOps	Azure topology, CI/CD, secrets, persistence, monitoring
4	Developer & Architecture Guide	Developers	Modules, the analysis pipeline, the data model, local dev
5	QC Methodology & Rules Reference	QC Engineers, PE	Rule types, the NEC calc engine, statuses, design stages
6	Configuration Reference	Developers, DevOps	Every environment variable, defaults, where each is set
7	Runbook & Troubleshooting	DevOps / on-call	Step-by-step operational procedures and known issues
8	Onboarding & Handoff	New team members	First-time setup, the deploy model, roadmap, ownership

Document control

All documents are Revision 1.0 and marked Confidential — Internal Use Only. They are generated from the current codebase; regenerate them when the platform changes materially. Roles are referenced by title, not by individual name.
